No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                           Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seq length: 0

                                     The present sequence encodes a human polypeptide, designated livin. Livin is an inhibitor of apoptosis protein 3 (IAP-3). Livin is present in certain cancer cell lines and prevents apoptosis. The livin polypeptide is useful for identifying compounds that inhibit and modulate livin function and activity. Such compounds that inhibit and medulate livin dysfunctional apoptosis condition. Livin polypeptides are useful as a source of probes and primers, and in gene therapy. Livin polypeptides and polymucleotides, their inhibitors and modulators are useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease

```

The invention relates to an antisense oligonucleotide targeted to nucleic acid encoding Livin and that specifically hybridises with nucleic acid encoding Livin and inhibits expression of Livin. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis. The presquence represents human livin DNA.

cc a method of detecting at least one nucleic acid molecule associated with cc comprising providing a biological sample comprising at least one cell to comprising providing a biological sample comprising at least one cell to comprising a coid molecule) which binds to at least one nucleic acid and presence of at least one molecule in the sample, a method cc and/or progression of colorectal cancer in an animal comprising providing the sample with at least one polypeptide associated with the initiation cc the sample with at least one polypeptide associated with the initiation cc the sample with at least one ligand that specifically binds at least one can amino acid sequence which varies by the addition, deletion or comprising providing the presence of the polypeptide in the sample, a method of screening for cancer comprising forming a preparation comprising and excepting the presence of the polypeptide in the sample, a method of screening for cancer comprising forming a preparation comprising at least one associated with the initiation and/or progression of colorectal cacid or a variant polypeptide emcoded by a pulleic acid or a variant polypeptide comprising cancer and detecting the polypeptide, and an antibody or itself exception of colorectal cacid or a variant polypeptide comprising capture of the agent with respect to comprise associated and detecrmining the activity of the agent with respect to cativity of the method, for use as a pharmaceutical. The methods are useful for screening for nucleic acid molecules that show a polypeptide respectively, that are associated with the initiation or substitution and are useful for detecting or molitoring colorectal cancer, where agents that modulate the activity of also useful for screening for mucleic acid molecules that show a polypeptide respectively, that are associated with the initiation or also useful for screening for molitoring and provided are useful for detecting or analyce provided and captured with the initiation or analyce provided and captured with the i

invention relates to

invention relates to a method of screening for nucleic acid molecules show altered expression in a first cell sample comprising comparing lene expression profile of the sample with that of a second reference le, where the first sample has been grown in the presence of butyrate crelated carbon source from which butyrate is directly or indirectly have the reference sample has not. The invention also relates to

related gene nucleotide sequences which encode the protestins given in ABRS821 to ABRS8709. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a drug screening assay. The nucleic acid is useful as diagnostic markers or therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down regulated in specific cancers (e.g. about 1031 genes up-regulated in acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer
                                                                                       screening, particularly for identifying agents for treating these

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                     The present invention relates to a DNA vaccine effective for eliciting an immune response against cancer cells which comprises a DNA construct operably encoding at least one cancer-associated Inhibitor of Apoptosis-family protein (IAP-family protein) and at least one immunoactive gene product in a pharmaceutical carrier. The invention is useful for treating cancer such as lung cancer, colorectal cancer and melanoma. The present sequence is the human livin beta splice variant DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a human polypeptide, designated livin. Livin is an inhibitor of apoptosis protein 3 (IAP-3). Livin is present in certain cancer cell lines and prevents apoptosis. The livin polypeptide is useful for identifying compounds that inhibit and modulate livin function and activity. Such compounds are useful in the treatment of a dysfunctional apoptosis condition. Livin polypeptides are useful as a source of probes and primers, and in gene therapy. Livin polypeptides and polynucleotides, their inhibitors and modulators are useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel livin polypeptides and polynucleotides useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease e.g. by gen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises the amino acid and coding sequences of survivin-like proteins. The survivin-like DNA and protein sequences are useful in diagnostics and screening compounds for treating various cancers and apoptosis abnormality, including gene therapy. The present DNA sequence encodes a survivin-like protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Baculovirus IAP repeat domain or RING-finger domain-containing survivin-
like polypeptides and encoded DNAs, applicable in diagnosis and screening
compounds for treating various cancers and apoptosis abnormality.

                                                                                                             US-09-762-577B-12 (1-309) x AAL42856
                                                                                                                                                             Percent Similarity:
                                                                                                                                                    Local Similarity:
                                                                                                                                                                                                                             The invention comprises the amino acid and coding sequences of survivilike proteins. The survivin-like DNA and protein sequences are useful diagnostics and screening compounds for treating various cancers and apoptosis abnormality, including gene therapy. The present DNA sequence encodes a survivin-like protein of the invention
                                                                                                                                                                                                                                                                                                          Baculovirus IAP repeat domain or RING-finger domain-containing survivin-like polypeptides and encoded DNAs, applicable in diagnosis and screening compounds for treating various cancers and apoptosis abnormality.
                                                                                                                                                                                                                                                                                          Claim 5;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
The invention relates to an antisense oligonucleotide targeted to a nucleic acid encoding Livin and that specifically hybridises with to nucleic acid encoding Livin and inhibits expression of Livin. The antisense oligonucleotide is useful for preparing a composition for
                                                                                                                        New antisense oligonucleotide, having a sequence targeted to a nucleic acid encoding Livin, useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis.
                                                                                                                                                                                                                                                                                                                            02-JUL-2002;
                                                                                                                                                                                                                                                                                                                                                               02-JUL-2002;
                                                                                                                                                                                                                                                                                                                                                                                                     08-JAN-2004
